

## MERISTEM SAFETY PROTOCOL AGAINST COVID-19

Following the guidelines of the WHO, in relation to the pandemic caused by COVID-19, at MERISTEM we have adapted all our working protocols with **the aim of ensuring the safety of both our workers, and clients, collaborators and suppliers.**

To this end, we continue to manufacture all our products, with all the safety and prevention measures recommended by the WHO and other international bodies. **To this effect, the following protocols have been adopted:**

- All work surfaces and tools are **regularly disinfected.**
- In all cases where it has been possible to carry out activity as usual, **employees are teleworking.**
- Workers who continue to go to the company facilities, **follow the protocol on transport, social distancing and hygiene and disinfection of hands.**
- **Disinfectant dispensers have been installed** in visible areas of the company to facilitate the disinfection of hands.
- All workers use **obligatory protective equipment.**
- Before being loaded, **shipments are disinfected** with a 0.5% sodium hypochlorite solution to ensure the inactivation of any virus.

**All these measures will remain in force until the end of the health emergency. At MERISTEM we continue to work to offer you the best service.**

*Agriculture does not stop. And nor do we.*
